Methods for Treating Autoimmune Diseases and Transplantation Rejection

Singer, D.S., Kohn, L.D., Mozes, E., Saji, M. (NCI)

Serial No. 08/503,525 filed 21 Aug 95 (CIP of 08/480,525) and Serial No. 08/464,130 filed 7 Jun 95 (DIV of 08/073,830)

Methods for treating autoimmune diseases in mammals and for preventing or treating transplantation rejection in a transplant recipient are described in this invention. The invention relates to methods for treating and preventing these diseases, using drugs capable of suppressing expression of the major histocompatibility complex (MHC) Class I molecules. The invention further includes method for *in vivo* and *in vitro* assays, for the development and assessment of drugs capable of suppressing expression of MHC Class I molecules. Furthermore, the invention provides a method for preventing rejection of cells containing a recombinant gene transplanted into a mammal in need of a gene therapy. Methods for Treating Autoimmune Diseases and Transplantation Rejection

Singer, D.S., Kohn, L.D., Mozes, E., Saji, M. (NCI)

Filed 7 Jun 95

Serial No. 08/480,525 (FWC of 08/073,830)

Methods for treating autoimmune diseases by suppressing the expression of the major histocompatibility complex (MHC) class I molecules by administering either methimazole, methimazole derivatives, carbimazole, propylthiouracil, thionamides, thiourelylenes, thioureas, and thiourea derivatives. These compounds can be used to treat diseases such as rheumatoid arthritis, psoriasis, juvenile diabetes, primary idiopathic myxedema, myasthenia gravis, scleroderma, De Quervains thyroiditis, systemic lupus erythematosus dermatomyositis, polyarteritis nodosa, and polymyositis. This invention also provides the means for inhibiting transplantation rejection in humans. Also provided are *in vivo* and *in vitro* means for assessing and developing drugs capable of suppressing the MHC class I molecules. (portfolio: Internal Medicine—Therapeutics, anti-inflammatory)

Mutants Having a Deficit of Functional Steroid Hormone Receptors

Korach, K.S. (NIEHS)

Filed 7 June 95

Serial Number 08/480,854

This invention concerns "knockout" animals, including mice, which have a deficit of functional steroid hormone receptors, DNA constructs containing the mutations, and methods for producing the animals. The mutation is introduced into the animal or its ancestors at an embryonic stage. These knockout animals provide a model system for studying the biological role of hormones, including steroid hormones and sex steroids, in growth, development, morphological differentiation, and sexual and reproductive behavior and cycles, etc. More specifically, the animals may serve as models for testing sex hormones and synthetics that mimic or antagonize sex hormones for use in birth control methods or as hormone replacement therapies. In addition, they provide a system for the characterization of materials suspected of precipitating or conferring protection against osteoporosis, cardiovascular disease, breast cancer, endometrial cancer, and other cancers. Nitroxides as Protectors Against Oxidative Stress

Mitchell, J.B., Samui, A., DeGraff, W., Hahn, S. (NCI)

Filed 7 Jun 95

Serial No. 08/473,960 (CIP of 07/859,622, U.S. Patent 5,462,946 issued 31 Oct 95; CON of 07/494,532)

New metal-independent nitroxide compounds are antioxidants capable of protecting cells, tissues, and organs against the harmful effects of toxic oxygen-related species (hydroxyl radical, hydrogen peroxide, superoxide). These toxic oxygen-related species have been implicated in tissue damage from ionizing radiation, reperfusion injury, adult respiratory distress syndrome, inflammation, and agents involved in such processes as carcinogenesis and aging. These mimetic agents have several advantages over natural antioxidants such as superoxide dismutase in that they can exert protection inside the cell since they are small and uncharged. Additionally, long-term administration of these agents to animals induces weight reduction without untoward effects. (portfolio: Internal Medicine—Miscellaneous)

Heparin—and Sulfatide-Binding Peptides From the Type I Repeats of Human Thrombospondin

Roberts, D.D., Browning, P.J., Bryant, J., Inman, J.K., Krutzsch, H.C., Guo, N. (NCI)

Filed 21 Mar 94

Serial No. 08/215,085 (CIP of 07/801,812, U.S. Patent 5,357,041 issued 18 Oct 94)

This invention describes a new family of related peptides that bind with high affinity to heparin or to heparin sulfate proteoglycans and inhibit specific functions of these molecules. The peptides thus are antagonists of basic fibroblast growth factor. Some of the peptides contain a second sequence that mediates activation of transforming growth factor- β . Stable analogs of these peptides have been prepared that resist proteolysis and retain activity *in vivo*. The ability of these peptides to modulate tumor growth and angiogenesis has been demonstrated, and suggest that they might be useful as cancer therapeutic agents. Furthermore, the peptides may be useful for promoting adhesion to substrates coated with the peptides. The novel compounds, which are derived from the adhesive protein thrombospondin, have binding constants 10 to 100 times greater than those of currently available inhibitors; in addition, the heparin-binding sequence does not require an ionic charge, thus making them suitable

for pharmaceutical preparations. It is expected that the high potency of these agents will lower the effective dose needed, and, subsequently, will reduce the immunological response against the peptides and the risks of toxicity. (portfolio: Internal Medicine—Therapeutics, anti-inflammatory)

Peptide Derivatives of Cytochrome b558 and Their Use as Medicaments [as Anti-Inflammatory Agents]

Malech, H., Rotrosen, D. (NIAID)
Filed 24 May 90
Serial No. 07/527,767 (CIP of 07/
331,652)

Licensing Contact: Carol Lavrich, 301/
496-7735 ext 287

A new anti-inflammatory agent based on two c-terminal amino acid sequences of cytochrome b558 has been shown to inhibit the production of toxic oxygen products (superoxide, peroxide) by human phagocytic cells. Because of its specificity for phagocytic cells, it is expected that these peptide derivatives would not have the side effects of other anti-inflammatory agents in general use.
