

estimated annual cost to respondents = \$23,250 + \$9,300 = \$32,550.

*Needs and Uses:* Section 76.614 requires that cable television operators transmitting carriers in the frequency bands 108–137 and 225–400 MHz shall provide for a program of regular monitoring for signal leakage by substantially covering the plant every three months. This collection (3060–0332) accounts for the paperwork and recordkeeping burden associated with maintaining logs that show the date and location of each leakage source identified, the date on which the leakage was repaired and the probable cause of the leakage. This data is used by cable television systems and the Commission to prevent, locate and

eliminate harmful interference as it occurs, to help assure safe operation of aeronautical and marine radio services and to minimize the possibility of interference to these safety-of-life services. If this collection of information is not conducted, there would be a greater likelihood of harmful interference to aeronautical and safety radio services. Commission efforts to locate and eliminate such interference would be impaired, and there would be a potentially greater risk to safety-of-life and property.
