**SUPPLEMENTARY INFORMATION:**

**I. Abstract**

To make it easier for people to be counted in the Census 2000, the Census Bureau will provide several ways for households to respond. In addition to receiving responses through mailed questionnaires and enumerator operations, the Census Bureau will enable the public to initiate responses on forms available in public places, by telephone, or via the Internet.

While multiple methods of responding increases the opportunities for people to be counted, these methods also increase the likelihood of receiving multiple responses for some housing units. The Census Bureau has devised an automated process to manage this situation, called multiple response resolution.

To evaluate this process, we will conduct a survey of those housing units which were affected by the multiple response resolution process. We will conduct this survey shortly after Census 2000 and ask questions about the residency status of the persons that were listed on the multiple responses for that housing unit on Census Day (April 1, 2000). All information collected will be pertinent to verifying the accuracy of the multiple response resolution process.

The sample will consist of approximately 7,500 housing units with the household being contacted via a personal visit in late October through early November, 2000. We will use the data collected to determine how well the multiple response resolution process functioned.

**II. Method of Collection**

Specially trained interviewers will administer the survey using a paper questionnaire designed for this evaluation.
