

the fact that a site or facility is in litigation does not necessarily mean that the Ombudsman should refrain from conducting an investigation of all issues arising at that site or facility. For instance, if the issue before a court is the authority of the Agency to get access to a piece of property, that would not create a presumption against an investigation of alleged deficiencies regarding remedy selection.

For your information, we are providing details of the two alternative approaches to this matter we considered but did not select. The first alternative approach removed any restrictions on the Ombudsman's ability to conduct an inquiry concerning an issue or dispute which is in litigation. The Ombudsman would be free to conduct an inquiry regardless of whether an issue or dispute was in litigation.

The second alternative approach would restrain the Ombudsman from conducting new fact gathering concerning decisions made based on the administrative record. The Ombudsman would remain able to audit the existing information and data that were part of the Agency's factual record. Under this model, if the Ombudsman concluded that additional fact finding and data gathering were necessary, that would become part of his recommendation. If the Agency agreed with this recommendation, it would conduct additional information gathering by utilizing the appropriate program staff and established procedures. The Ombudsman would be precluded from undertaking separate fact finding activities such as public meetings and formal on-the-record interviews. This approach would address concerns that an Ombudsman's activities may create a

second record outside of the official administrative record, which could confuse and potentially mislead the public and could damage the Agency's position during litigation.

Is the chosen approach the most appropriate?
