U.S. Patent No. 5,835,231 is owned by the U.S. government, as represented by the Secretary of Commerce. The present invention permits broadband, ultra-sensitive measurement of optical absorption for any state of matter by the cavity ring-down technique using a small, monolithic, total internal reflection ring cavity. It significantly

advances the sensitivity, accuracy, and adaptability of optical absorption spectroscopy for decisive qualitative and quantitative chemical analysis, with greatly increased trace analysis capability.

U.S. Patent No. 5,986,768 is owned by the U.S. government, as represented by the Secretary of Commerce. An optical cavity resonator device is provided for conducting sensitive measurement of optical absorption by matter in any state with diffraction-limited spatial resolution through utilization of total internal reflection within a high-Q (high quality, low loss) optical cavity. Intracavity total reflection generates an evanescent wave that decays exponentially in space at a point external to the cavity, thereby providing a localized region where absorbing materials can be sensitively probed through alteration of the Q-factor of the otherwise isolated cavity. When a laser pulse is injected into the cavity and passes through the evanescent state, an amplitude loss resulting from absorption is incurred that reduces the lifetime of the pulse in the cavity. By monitoring the decay of the injected pulse, the absorption coefficient of matter within the evanescent wave region is accurately obtained from the decay time measurement.

U.S. Patent No. 5,943,136 is owned by the U.S. government, as represented by the Secretary of Commerce. The present invention relates to a device which permits the sensitive measurement of the optical absorption of matter in any state with diffraction-limited spatial resolution using total internal reflection within a high-Q (high-quality, low-loss) optical cavity. Its use provides qualitative and quantitative analysis of material composition and rates of chemical reactions. The device is especially well suited for thin film diagnostics.

**SUPPLEMENTARY INFORMATION:** The National Marine Sanctuaries Act (NMSA), 16 U.S.C. 1341 *et seq.*, authorizes the Secretary of Commerce (Secretary) to designate discrete areas of the marine environment as national marine sanctuaries to protect their special conservation, recreational, ecological, historical, cultural, archaeological, scientific, educational, or esthetic qualities. The NMSA is administered by the National Oceanic and Atmospheric Administration (NOAA) through the National Marine Sanctuary Program (NMSPP).

The public scoping process, including the public scoping meetings, is intended to solicit information and comments on the range and significance of issues related to the designation and management of a Northwestern Hawaiian Islands National Marine Sanctuary. The results of this scoping process will assist NOAA in formulating alternatives for a draft management plan and draft environmental impact statement for the proposed designation. NOAA encourages the public and interested parties to submit (via mail, e-mail, or fax) comments throughout the scoping period and to attend public scoping meetings at the locations listed above.

Each public scoping meeting will include a brief overview of the proposed Sanctuary region and its history, and an opportunity for members of the public to provide verbal comments through a round-table format. Each round table will accommodate 10-15 people and will have its own facilitator and note-taker who will work with the participants at that table to obtain their comments and ideas. All comments offered at the round-tables are considered part of the official record; however, participants are strongly encouraged to submit written comments to ensure that the full scope of their thoughts and ideas is considered by NOAA.
