${ }^{1}$ Metric tons and kilograms are as converted from pounds and may not necessarily add due to rounding.

The Assistant Administrator for fisheries, NOAA (AA) finds good cause pursuant to 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment because it would be impracticable and contrary to the public interest. This rule corrects a calculation error in the state allocations for bluefish in the final rule published on February 24, 2006 ( 71 FR 9471). When the final state allocations where calculated to reflect the new transfer amount, NMFS inadvertently made an error in calculation; i.e., the table that revised the individual state quota allocations carried over a conversion factor that did not correctly account for the RSA quota based on the new proportion (recreational/commercial split). Providing for a public comment period for this rule would prevent the correction of the aforementioned final rule before it becomes effective. Publication of incorrect state quota allocations could cause some unnecessary confusion among those states whose allocation is different from the levels previously calculated. The correction provides a slightly higher allocation to each of the states.
The AA further finds pursuant to 5 U.S.C. 553(d)(3) good cause to waive the thirty (30) delayed effectiveness period for the reasons stated above. This rule corrects a calculation error in the state allocations for bluefish in the final rule published on February 24, 2006 (71 FR 9471). When the final state allocations were calculated to reflect the new
transfer amount, NMFS inadvertently made an error in calculation; i.e., the table that revised the individual state quota allocations carried over a conversion factor that did not correctly account for the RSA quota based on the new proportion (recreational/ commercial split). Providing for a 30day delay in effectiveness for this rule would prevent the correction of the aforementioned final rule before it becomes effective. Publication of incorrect state quota allocations could cause some unnecessary confusion among those states whose allocation is different from the levels previously calculated.

This rule has been determined to be not significant under Executive Order 12866.

Dated: March 13, 2006.
James W. Balsiger,
Acting Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.
[FR Doc. 06-2617 Filed 3-16-06; 8:45 am]
BILLING CODE 3510-22-S

## DEPARTMENT OF COMMERCE

## National Oceanic and Atmospheric Administration

## 50 CFR Part 679

[Docket No. 060216045-6045-01; I.D. 031406B]

## Fisheries of the Exclusive Economic Zone Off Alaska; Adjustment of Pacific Cod Total Allowable Catch Amounts in the Bering Sea and Aleutian Islands

agency: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.
ACTION: Temporary rule; inseason adjustment.
sUMMARY: NMFS is adjusting the Pacific cod total allowable catch (TAC) amount in the Bering Sea and Aleutian Islands Management Area (BSAI). This action is necessary to prevent exceeding the Pacific cod acceptable biological catch (ABC) in the BSAI and is consistent with the goals and objectives of the Fishery Management Plan for Groundfish of the BSAI (FMP).
DATES: Effective March 14, 2006, through 2400 hrs, Alaska local time (A.l.t.), December 31, 2007.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907-586-7228.
SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI according to the FMP prepared by
the North Pacific Fishery Management Council (Council) under authority of the Magnuson-Stevens Fishery
Conservation and Management Act.
Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.
The 2006 and 2007 final harvest specifications for groundfish in the BSAI (71 FR 10894, March 3, 2006) establish the 2006 and 2007 Pacific cod ABCs as 194,000 metric tons (mt) and $148,000 \mathrm{mt}$, respectively. The TACs are set equal to the ABCs for Pacific cod in the BSAI.
On March 1, 2006, the Alaska Department of Fish and Game announced by emergency regulation, a Pacific cod guideline harvest level
(GHL), west of 170 degrees west longitude in the Aleutian Islands subarea, equal to $3 \%$ of the Pacific cod ABC in the BSAI established in the final harvest specifications for groundfish in the BSAI ( 71 FR 10984, March 3, 2006).

As of March 1, 2006, the Administrator, Alaska Region, NMFS, (Regional Administrator) has determined that the current TACs are incorrectly specified and an adjustment is necessary to prevent exceeding the ABC. The best available scientific information for the Pacific cod fisheries in the BSAI indicates that the addition of a state waters GHL in the Aleutian Islands subarea would result in overall harvest amounts that exceed the 2006 and 2007 Pacific cod ABCs in the BSAI.

The Council, its Advisory Panel, and its Scientific and Statistical Committee have determined that the acceptable harvest level for the combined State and Federal Pacific cod fisheries should not exceed the ABC since this could result in an unacceptable change in the biological stock status of Pacific cod in the BSAI. Therefore, in accordance with § 679.25(a)(1)(iii) and (2)(iv), the Regional Administrator adjusts the 2006 and 2007 Pacific cod TACs in the BSAI.

Pursuant to §679.20(a)(7), Tables 1, 2, 5,12 , and 14 of the 2006 and 2007 final harvest specifications for groundfish in the BSAI ( 71 FR 10894, March 3, 2006) are revised for the 2006 and 2007 Pacific cod TACs consistent with this adjustment.

${ }^{1}$ For most non-trawl gear the first season is allocated 60 percent of the ITAC and the second season is allocated 40 percent of the ITAC. For jig gear, the first season and third seasons are each allocated 40 percent of the ITAC and the second season is allocated 20 percent of the ITAC. No seasonal harvest constraints are imposed for the Pacific cod fishery by catcher vessels less than 60 feet ( 18.3 m ) LOA using hook-and-line or pot gear. For trawl gear, the first season is allocated 60 percent of the ITAC and the second and third seasons are each allocated 20 percent of the ITAC. The trawl catcher vessels' allocation is further allocated as 70 percent in the first season, 10 percent in the second season and 20 percent in the third season. The trawl catcher/processors' allocation is allocated 50 percent in the first season, 30 percent in the second season and 20 percent in the third season. Any unused portion of a seasonal Pacific cod allowance will be reapportioned to the next seasonal allowance.

## Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the adjustment of the 2006 and

2007 Pacific cod TACs to account for the state waters GHL in the Aleutian Islands subarea. On March 1, 2006, ADF\&G announced the state waters GHL in the Aleutian Islands subarea. Since the 2006 fisheries are currently underway and the 2006 and 2007 TACs are jointly established, it is necessary to immediately adjust the TACs to avoid overharvesting gear shares and seasonal allowances of Pacific cod in the BSAI. Immediate adjustment is necessary to allow for the orderly conduct and efficient operation of this fishery, allow the industry to plan for the remainder of the 2006 and 2007 fishing seasons, and avoid potential disruption to the fishing fleet and processors.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by $\S 679.20$ and $\S 679.25$ and is exempt from review under Executive Order 12866.
Authority: 16 U.S.C. 1801 et seq.
Dated: March 14, 2006.

## James P. Burgess,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service. [FR Doc. 06-2616 Filed 3-14-06; 2:34 pm] BILLING CODE 3510-22-P

[^0]:    ${ }^{1}$ These amounts apply to the entire BSAI management area unless otherwise specified. With the exception of pollock, and for the purpose of these harvest specifications, the Bering Sea (BS) subarea includes the Bogoslof District.
    ${ }^{2}$ Except for pollock and the portion of the sablefish TAC allocated to hook-and-line and pot gear, 15 percent of each TAC is put into a reserve. The ITAC for each species is the remainder of the TAC after the subtraction of these reserves.
    ${ }^{3}$ Except for pollock, squid and the hook-and-line or pot gear allocation of sablefish, one half of the amount of the TACs placed in reserve, or 7.5 percent of the TACs, is designated as a CDQ reserve for use by CDQ participants (see $\S \S 679.20$ (b)(1)(iii) and 679.31).
    ${ }^{4}$ Pursuant to $\S 679.20(\mathrm{a})(5)(\mathrm{i})(\mathrm{A})(1)$, the annual Bering Sea pollock TAC after subtraction for the CDQ directed fishing allowance -10 percent and the ICA -3.35 percent, is further allocated by sector for a directed pollock fishery as follows: Inshore - 50 percent; catcher/processor - 40 percent; and motherships - 10 percent. Pursuant to $\S 679.20(\mathrm{a})(5)$ (iii)(B)(2)(i) and (ii), the annual AI pollock TAC, after subtracting first for the CDQ directed fishing allowance-10 percent and second for the ICA $-1,800 \mathrm{mt}$, is allocated to the Aleut Corporation for a directed pollock fishery.
    ${ }^{5}$ Twenty percent of the sablefish TAC allocated to hook-and-line gear or pot gear and 7.5 percent of the sablefish TAC allocated to trawl gear is reserved for use by CDQ participants (see $\S 679.20(\mathrm{~b})(1)$ (iii)).
    6 "Other flatfish" includes all flatfish species, except for halibut (a prohibited species), flathead sole, Greenland turbot, rock sole, yellowfin sole, arrowtooth flounder and Alaska plaice.
    7 "Other rockfish" includes all Sebastes and Sebastolobus species except for Pacific ocean perch, northern, shortraker, and rougheye rockfish.
    8 "Other species" includes sculpins, sharks, skates and octopus. Forage fish, as defined at $\S 679.2$, are not included in the "other species" category.

[^1]:    ${ }^{1}$ The seasonal apportionment of Atka mackerel in the open access fishery is 50 percent in the A season and 50 percent in the B season. Listed AFA catcher/processors are limited to harvesting no more than zero in the Eastern Aleutian District and Bering Sea subarea, 20 percent of the annual ITAC specified for the Western Aleutian District, and 11.5 percent of the annual ITAC specified for the Central Aleutian District
    ${ }^{2}$ Harvest Limit Area (HLA) limit refers to the amount of each seasonal allowance that is available for fishing inside the HLA (see §679.2). In 2006 and 2007, 60 percent of each seasonal allowance is available for fishing inside the HLA in the Western and Central Aleutian Districts.
