

Alternatives assessed in detail include the: (1) No Action Alternative; (2) Proposed Action (construction/operation of the HGS at the Salem site eight miles east of Great Falls, and (3) Industrial Park Site (construction/operation of the power plant, but no wind generation, at an alternate site in a designated industrial park just north of Great Falls). The No Action Alternative avoids most direct adverse environmental effects, but potentially entails a number of indirect and cumulative impacts associated with other generation sources from which SME would have to purchase power if unable to generate its own. In most respects, with the exception of cultural and historic resources, impacts from the Proposed Action (2) and Alternative Site (3) are similar, though the proximity of the Alternative Site to greater numbers of residents intensifies some of these impacts, such as traffic, noise, and air quality; nonetheless, these impacts would not likely be significant. Potential air quality impacts at both locations would be reduced to non-significant levels through the application of CFB technology and other pollution controls. The proposed plant would comply with Montana's air quality standards, including its recent mercury rule. The agency's preferred alternative is Alternative 2.

The FEIS concludes that the Proposed Action would have significant adverse impacts on historic and visual resources, because it is located on and adjacent to the Great Falls Portage National Historic Landmark (NHL). In accordance with Section 106 of the National Historic Preservation Act, consultation was initiated with a number of consulting parties and a consulting party meeting was held in Great Falls on October 5 to discuss RUS' adverse effect finding. The results of those discussions are integrated in the FEIS, including a draft Memorandum of Agreement (MOA) that proposes on-site and off-site mitigation measures to avoid and minimize these effects. Potentially significant impacts to traffic during construction were also identified with Alternative 2; a mitigation plan would be developed in cooperation with the Montana Department of Transportation to minimize or mitigate these impacts. Other adverse but non-significant impacts of the Proposed Action include those on soils, water, air, biological resources, noise, transportation, farmland and land use, human health and safety, and environmental justice. The Proposed Action would result in moderately beneficial socioeconomic impacts,

including increased employment opportunities, total purchases of goods and services, and an increase in the tax base.

Construction and operation of the proposed power plant at the Alternative Industrial Park Site would result in broadly similar impacts to those of the Proposed Action, but with some important distinctions. No wind turbines are proposed for the Industrial Park site. Due to space limitations at the Industrial Park site, ash from coal combustion would be hauled off-site to a licensed landfill for disposal. Adverse but non-significant impacts of the Alternative Site include those on soils, water, air, biological resources, noise, cultural and historic resources, visual resources, transportation, farmland and land use, human health and safety, and environmental justice. Building and operating the proposed SME power plant at the Alternative Site would produce moderately beneficial socioeconomic impacts, including increased employment opportunities, total purchases of goods and services, and an increase in the tax base.
