SUPPLEMENTARY INFORMATION:

I. Background

The collection of actual Unemployment Insurance (UI) administrative cost data from states' accounting records and projected expenditures for upcoming years is accomplished through the Resource Justification Model (RJM) data collection instrument. The data collected consists of program expenditures and hours worked by state staff, broken out by functional activity, for the most recent two years of expenditures. This actual cost data informs ETA's administrative funding allocation model so that state UI program administration funds are allocated in proportion to the level of state activities.

II. Review Focus

The Department of Labor is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

- Enhance the quality, utility, and clarity of the information to be collected; and

- Minimize the burden of the information collection on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.
