SUPPLEMENTARY INFORMATION:

I. Introduction

By letter dated July 31, 2012, as supplemented March 14, May 23, and September 5, 2013, PG&E submitted license amendment request (LAR) 12-003 (ADAMS Accession No. ML122270603) to the NRC to amend Materials License No. SNM-2511 for the DC ISFSI in accordance with 10 CFR Part 72. PG&E's application requested that the ISFSI Technical Specifications (TS) be revised as follows:

1. Tables 2.1-7, 2.1-8, and 2.1-9 in TS 2.0, "Approved Contents," are revised allowing up to a 28.74kW heat load for uniform loading and 25.572kW heat load for regionalized loading. This changes the maximum allowable decay heat per storage location, in watts, determined from Table 2.1-7 or 2.1-9 to be consistent with this proposed license amendment request. Table 2.1-8 is revised to delete the note that limits Zirlo clad fuel to a burnup of 45,000 MWD/MTU and replace the existing Note 3 with a note that refers to TS 2.3, "Alternate MPC-32 Fuel Selection Criteria."

2. TS 2.3, "Alternate MPC-32 Fuel Selection Criteria," is revised to add reference to Table 2.1-9 as regionalized loading of high burn-up fuel (HBF).

3. TS 3.1.1, "Multi-Purpose Canister (MPC)," Surveillance Requirement (SR) 3.1.1.2 is revised to add a new helium backfill pressure range for MPCs with heat loads less than or equal to 28.74kW.

4. TS 3.1.4, "Supplemental Cooling System," Applicability is changed to only be applicable for unloading of high burnup fuel loaded in 2012 under the provisions of License Amendment No. 2.

5. Addition of TS 4.1.3 Design Features Important to Thermal Analysis-

- a. A maximum average yearly temperature of 65 °F is the basis for a loaded overpack in the cask transfer facility, or storage on the ISFSI pad.

- b. A maximum temperature of 100 °F, averaged over a 3-day period, is the

basis for transfer activities in the transfer cask.

In accordance with 10 CFR 72.16, a Notice of Docketing and Opportunity to Request a hearing was published in the **Federal Register** on January 2, 2013 (78 FR 123). On February 11, 2014, the NRC approved and issued Amendment No. 3 to Materials License No. SNM-2511 (ADAMS Accession No. ML14043A517), held by PG&E for the receipt, possession, transfer, and storage of spent fuel at the DC ISFSI. Amendment No. 3 was effective as of the date of issuance. Pursuant to 10 CFR 72.46(d), the NRC is providing notice of the action taken.

Amendment No. 3 complies with the standards and requirements of the Atomic Energy Act of 1954, as amended

(the Act), and the NRC's rules and regulations. As required by the Act and the NRC's rules and regulations in 10 CFR Chapter I, the NRC has made appropriate findings, which are set forth in the Amendment No. 3 safety evaluation report (SER) (ADAMS Accession No. ML14049A476). Also as described in the SER, the NRC determined that issuance of Amendment No. 3 meets the criteria specified in 10 CFR 51.22(c)(11) for a categorical exclusion. Thus, the preparation of an environmental assessment or an environmental impact statement is not required. On February 11, 2014, the California Energy Commission was informed of the NRC's action. The state had no comments.

II. Further information

The NRC has prepared an SER that documents the staff's review and evaluation of the amendment. In accordance with 10 CFR 2.390 of NRC's "Rules of Practice," final NRC records and documents related to this action, including the application for amendment and supporting documentation, and the SER, are available electronically at the NRC's Electronic Reading Room, at: <http://www.nrc.gov/reading-rm/adams.html>. From this site, you can access NRC's ADAMS, which provides text and image files of NRC's public documents. The ADAMS Accession Numbers for the applicable documents are:
