SUPPLEMENTARY INFORMATION:

I. Background

The Department of Labor, as part of its continuing effort to reduce paperwork and respondent (*i.e.*, employer) burden, conducts a preclearance consultation program to provide the public with an opportunity to comment on proposed and continuing collection of information requirements in accord with the Paperwork Reduction Act of 1995 (PRA-95) (44 U.S.C. 3506(c)(2)(A)). This program ensures that information is in the desired format, reporting burden (time and costs) is minimal, collection instruments are clearly understood, and OSHA's estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (the OSH Act) (29 U.S.C. 651 *et seq.*) authorizes information collection by employers as necessary or appropriate for enforcement of the OSH Act or for developing information regarding the causes and prevention of

occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires that OSHA obtain such information with minimum burden upon employers, especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of efforts in obtaining information (29 U.S.C. 657).

The collections of information in the Standard are necessary for implementation of the requirements of the Standard. The information is used by employers to ensure that processes using highly hazardous chemicals with the potential for a catastrophic release are operated as safely as possible. The employer must thoroughly consider all facets of a process, as well as the involvement of employees in that process. Employers analyze processes so that they can identify, evaluate and control problems that could lead to a major release, fire, or explosion.

The major information collection requirements in this Standard include: Consulting with workers and their representatives on and providing them access to process hazard analyses and the development of other elements of the standard; developing a written action plan for implementing employee participation in process hazard analyses and other elements of the standard; completing a compilation of written process safety information; performing a process hazard analysis; documenting actions taken to resolve process hazard analysis team findings and recommendations; updating, revalidating and retaining the process hazard analysis; developing and implementing written operating procedures that are accessible to workers; reviewing operating procedures as often as necessary and certifying the procedures annually; developing and implementing safe work practices; preparing training records; informing contract employers of known hazards and pertinent provisions of the emergency action plan; maintaining a contract worker injury and illness log; establishing written procedures to maintain the integrity of and document inspections and tests of process equipment; providing information on permits issued for hot work operations; establishing and implementing written procedures to manage process changes; preparing reports at the conclusion of incident investigations, documenting resolutions and corrective measures, and reviewing the reports with affected personnel; establishing and implementing an emergency action plan; developing a compliance audit report and certifying compliance; and disclosing information necessary to
